Figma

Lead dev / Hyperspread

March 2022 - January 2025, Remote

Hyperspread is a 360° local marketing platform designed to manage local communication. It's a SaaS tool that brings together all the innovative local marketing channels to support store communication.

- Management and supervision of the development team
- Migration of the platform to TypeScript and upgrade of React versions
- Platform optimization
- Creation and maintenance of the mobile application
- Creation and implementation of a new design system

Lead dev / canB

March 2021 - February 2022, Remote

canB is an impact-driven neobank offering cashback on its banking cards, which can be donated to partner associations. Additionally, purchases at partner merchants provide extra cashback, up to 20% of the transaction amount.

- Internalization of code previously developed by external companies and structuring of the development environment through various tools.
- Implementation of 3D Secure v2 authentication (authentication performed via the canB mobile app during online purchases).
- Contribution to the initial setup and development of the website using Flutter Web.

Flutter

Front End dev | UI/UX Design / Facilitatrip

May 2018 - August 2020, Remote

FacilitaTrip simplifies the complex process of tailor-made travel requests for travel agencies by providing a comprehensive platform. Features include itinerary creation and service booking, while tour operators can manage all essential information from the same platform

- Development of real-time route mapping features on the map using Rome2Rio's best itinerary API; routes automatically updated when adding new trip stages.
- Design and integration of UI mockups for multiple features.
- Development of a channel manager to centralize the management of products, bookings, and related data.
